

JuniorSTEM at Leopold!

STEM at Leopold:

This term, Ms Maher put together a Lego STEM workshop for all classes year 1-6 to take part in. Students absolutely loved it! Led by a JuniorSTEM member, Nick, students got to build different mechanisms and make their own algorithms using tablets.

Students were able to create their own mechanism and were taught how to control it through coding on a JuniorSTEM app.

Vocational Aspirations:

At the end of each session, Nick went through different jobs students could get if they continued with a coding or engineering curriculum throughout school.
